

Sole US Distributor of

NeuRemedy[®], NeuRemedy[®] **Plus** and NeuRemedy[®] **Ultra**

Recommended Protocol and Guidelines for Patient Management

- Each capsule of NeuRemedy contains 150 mgs of benfotiamine in a proprietary formulation
- Each capsule of NeuRemedy **Plus** contains 150 mgs of benfotiamine and 500 mcgs of methylcobalamin in a proprietary formulation
- Each capsule of NeuRemedy **Ultra** contains 150 mgs of benfotiamine and 6 mcgs of methylcobalamin in a proprietary formulation

Guidelines: The NeuRemedy line of products are sold exclusively to physicians for use with their patients suffering from the symptoms associated with thiamine deficiency, i.e. numbness, dysesthesia and/or shooting pains to the feet and legs*. Thiamine deficiency is common in diabetes, alcoholism, obesity, advanced age, chemotherapy, and nerve injury. The mechanism of action by which all NeuRemedy products are believed to work is through the reversal of thiamine (vitamin B1) deficiency. All NeuRemedy products contain benfotiamine, a safe and highly bioactive form of thiamine.

NeuRemedy **Plus** contains 500 mcgs of methylcobalamin and NeuRemedy **Ultra** contains 6 mcgs of methylcobalamin. Methylcobalamin is the most preferred form of vitamin B12. Vitamin B12 deficiency is often experienced by patients being treated for diabetes, patients being treated for GERD with proton pump inhibitors or H2 blockers, and vegetarians.

The best results for all NeuRemedy products are obtained by using a loading dose of two capsules twice a day with food followed by a maintenance dose of one capsule twice a day with food thereafter. All NeuRemedy products are to be taken orally. It is recommended that NeuRemedy Ultra be used for long term maintenance of patients in need of ongoing vitamin B12 supplementation.
